

How to screen and webcam record online

Step 1. Click on the screen and camera tool

Click on the record & create tab on the toolbar, then click on the screen and camera button.

A popup window will appear with permissions. Allow Clipchamp access to your camera and microphone if you haven't used our webcam recorder before. Click allow when ready to proceed.

Step 2. Record your screen and video

Click on the red record button to start recording.

Note: The screen and camera recorder lets you record up to 30 minutes in total.

A smaller popup window will appear with screen recording options. Either record your browser tab, window, or entire screen. You will be able to see your webcam in the bottom left corner of the popup window. Once selected, click on the share button.

It's now time to record your computer screen and webcam. If you have selected to record a Chrome tab, you will automatically be taken to the tab in a full screen preview like this.

Once you are happy with your recording, click on stop sharing button.

Note: You won't be able to see your webcam while recording in the tab, window, or screen, but the camera recording is working.

Step 3. Preview and save your screen and camera recording

A preview of your screen and camera recording will appear. Here, you can watch your screen and camera recording with or without sound. Click on the retake recording button if you would like to redo your video, or click save and edit to return back to the editor.

If you want to abandon your video, click on the x button in the top right corner of the video. You will be presented with a new window giving you options to stay or exit.
