

## Megapixel(MP)

One million pixels. Megapixels are the measurement of the resolution of still and video cameras, monitors and scanners. For example, a 16-megapixel (16MP) still camera captures a picture composed of some 15.9 million pixels, each pixel containing a red, green and blue colour dot. The image resolution is 5312x2988 (5,312 pixels across; 2,988 down).

## Properties of mega pixel

If pixel is high, quality of picture is high and file size always high.
